

Silent Engines Demo Proposal

We currently have two publicly available demos, which are intriguing, but not professional quality. Due to their use of **Bitsy**, they do not demonstrate a proprietary **Outpost4** aesthetic. A text-based **Silent Engines** demo could be written in **Inkle** and exported as an **html** file which could then be O4-branded and enhanced using **custom CSS**. The addition of **Illustrations** would improve the appearance and immersive effect of the demo.

Releasing a well-designed, if simplistic, game demo will help **keep our current fanbase engaged** until the release of our more involved Marina demo. It also adds a finished product to our website, solidifying our legitimacy with prospective clients.
